# MATH3401/3901: Complex <br> Analysis/Advanced Complex Analysis 

## Assignment Number 2

Problem 1 (2 points) Determine the Möbius transformation (viewed as a mapping on $\overline{\mathbb{C}}$ ) mapping 2 to $0, i$ to $\infty$, and 0 to $-2 i$.

Problem 2 (4 points) Let $T$ be a mapping from $\Omega$, a subset of $\mathbb{C}$, to $\mathbb{C}$. A fixed point of $T$ is a point $z$ satisfying $T(z)=z$.
a) Show: any Möbius transformation, apart from the identity, can have at most 2 fixed points in $\mathbb{C}$. (The identity is the transformation $z \mapsto z$ ).
b) Give examples of Möbius transformations having (i) 2; (ii) 1 and (iii) no fixed points in $\mathbb{C}$.

Problem 3 (2 points) For $z \in \mathbb{C}$, show:
a) $\sin \bar{z}=\overline{\sin z}$;
b) $\cosh \bar{z}=\overline{\cosh z}$

Problem 4 (3 points) Find all solutions $z \in \mathbb{C}$ of the following (express your answers in the form $x+i y)$ :
а) $\log z=4 i$;
b) $z^{i}=i$.

Problem 5 (5 points)
a) Prove that $\cot ^{-1} z=\frac{-i}{2} \log \left(\frac{z+i}{z-i}\right)$, and note any restrictions on your domain.
b) Find all solutions $z \in \mathbb{C}$ of $\cot z=1$ (express them in the form $x+i y$ ).

Problem 6 (4 points) Let $\Omega_{1}$ and $\Omega_{2}$ be nonempty, closed sets in $\mathbb{C}$.
a) Show that the set $\Omega_{1} \cup \Omega_{2}$ is closed.
b) If instead $\Omega_{2}$ is nonempty and open:
(i) could $\Omega_{1} \cup \Omega_{2}$ still be closed?
(ii) Need it be closed?

Give proofs or examples/counterexamples.
Due: 2:00 P.M., Friday, 22/03/2024.
