MATH3401 Mid-sem Solis.

Q1. $-27000i = 27000e^{-ii/2}$ Since $27000i^3 = 30$, cube rocts of -27000i are (-ii/6 + 2ii/3) $30e^{i(-ii/6 + 2ii/3)}$ $30e^{i(-ii/6 + 2ii/3)}$ $30e^{i(-ii/6 + 2ii/3)}$ i.e. $\left\{30e^{i(-ii/6)}, 30e^{i(5ii/2)}, 30e^{i(5ii/2)}, 30e^{i(5ii/2)}\right\}$ i.e. $\left\{30\left(\frac{53}{2} - \frac{1}{2}i\right), 30i, 30\left(-\frac{53}{2} - \frac{1}{2}i\right)\right\}$ i.e. $\left\{1553-15i, 30i, -1553-15i\right\}$

Q2 a)
$$w = \cos e c^{2} \frac{1}{2}$$

=) $\frac{1}{2} = \sin w = \frac{e^{iw} - e^{-iw}}{2i}$

=) $\frac{1}{2} = \sin w = \frac{e^{iw} - e^{-iw}}{2i}$

=) $e^{iw} - \frac{3i}{2}e^{-e^{iw}} = 0$

=) $(e^{iw})^{2} - \frac{2i}{2}e^{iw} - | = 0$

=) $(e^{iw})^{2} - \frac{2i}{2}e^{iw} - | = 0$

=) $e^{iw} = \frac{2i}{2} + (1 - \frac{1}{2}e^{2} + 4)^{\frac{1}{2}e^{2}}$

=) $e^{iw} = \frac{2i}{2} + (1 - \frac{1}{2}e^{2})^{\frac{1}{2}e^{2}}$

=) $e^{iw} = \frac{2i}{2} + (1 - \frac{1}{2}e^{2})^{\frac{2}e^{2}}$

=) $e^{iw} = \frac{2i}{2} + (1 - \frac{1}{2}e^{2})^{\frac{2}{2}e^{$

Q3. a) (i) $u=x^2$, $v=-3y^3$ =) uz = 2x, vy = -9y2, uy = 0, vx = 0. ClRI ux=Vy=>2x=-9y2 only satisfied on the parabola x=-9/2y2. CIRIT Vx = - My 0=0 always true. So C/R hold precisely on {x+iy: x= 2y2} (ii) M, Uz, My, V, Nz, Ny cts on 122. C/R hold on Prom Lecture 15 => f is different iable precisely on the parabola {x+iy: x=-92y2}. (iii) f is not diff on any nobed in (=) nowhere analytic.

(iv) Because diff ble #> analytic but analytic => diff ble.

b) no, fis not bounded on C.

Consider e.g. zn=n.

 $f(z_n) = \cos z_n + \cosh z_n$ $= \cos n + \frac{e^n + e^{-n}}{2}$

 $\frac{2}{2}$ -1 $\Rightarrow \infty$ as $n \Rightarrow \infty$, (note)

So | f(zn) | -> 00 as n-> 00.

$$Q(4,a)Put f(2) = \frac{Q2+b}{C2+d}$$

 $f(3)=0 => 3q+b=0$

$$\Rightarrow f(z) = \frac{iz-3i}{z-3i}$$

b) No such Möb. transf exists. Möb. transfs are 14, but we need a map sending both 3 i & O to i.
