

MATH 3402
TUTORIAL SHEET 9

1. If

$$A = \begin{pmatrix} a & b \\ 0 & a \end{pmatrix}$$

show that

$$\|A\|_2 = \frac{1}{2} \left(|b| + \sqrt{|b|^2 + 4|a|^2} \right) ,$$

Ans.

$$A^*A = \begin{pmatrix} a^* & 0 \\ b^* & a^* \end{pmatrix} \begin{pmatrix} a & b \\ 0 & a \end{pmatrix} = \begin{pmatrix} |a|^2 & a^*b \\ b^*a & |b|^2 + |a|^2 \end{pmatrix}$$

$$|tI - A^*A| = (t - |a|^2)(t - (|a|^2 + |b|^2)) - |a|^2|b|^2 = t^2 - (2|a|^2 + |b|^2)t + |a|^4$$

$$t_+ = \frac{1}{2} (2|a|^2 + |b|^2 + \sqrt{|b|^4 + 4|a|^2|b|^2}) = \frac{1}{4} \left(\sqrt{|b|^2 + 4|a|^2} + |b| \right)^2$$

$$\|A\|_2 = \frac{1}{2} \left(|b| + \sqrt{|b|^2 + 4|a|^2} \right)$$

and if

$$A = \begin{pmatrix} 0 & 1 \\ a & b \end{pmatrix}$$

then

$$\|A\|_2 = \frac{1}{2} \left(\sqrt{(|a| + 1)^2 + |b|^2} + \sqrt{(|a| - 1)^2 + |b|^2} \right) .$$

Ans.

$$A^*A = \begin{pmatrix} 0 & a^* \\ 1 & b^* \end{pmatrix} \begin{pmatrix} 0 & 1 \\ a & b \end{pmatrix} = \begin{pmatrix} |a|^2 & a^*b \\ b^*a & 1 + |b|^2 \end{pmatrix}$$

$$|tI - A^*A| = (t - |a|^2)(t - (1 + |b|^2)) - |a|^2|b|^2 = t^2 - (1 + |a|^2 + |b|^2)t + |a|^2$$

$$t_+ = \frac{1}{2} \left(1 + |a|^2 + |b|^2 + \sqrt{(|a|^2 + 2|a| + 1 + |b|^2)(|a|^2 - 2|a| + 1 + |b|^2)} \right)$$

$$= \frac{1}{4} \left(\sqrt{(|a| + 1)^2 + |b|^2} + \sqrt{(|a| - 1)^2 + |b|^2} \right)^2$$

$$\|A\|_2 = \frac{1}{2} \left(\sqrt{(|a| + 1)^2 + |b|^2} + \sqrt{(|a| - 1)^2 + |b|^2} \right)$$

These two results are particular cases of

$$\left\| \begin{pmatrix} a & b \\ c & d \end{pmatrix} \right\|_2 = \frac{1}{2} \left(\sqrt{S^2 + 2|\Delta|} + \sqrt{S^2 - 2|\Delta|} \right)$$

where

$$S^2 = |a|^2 + |b|^2 + |c|^2 + |d|^2$$

$$\text{and } \Delta = ad - bc$$

In fact, we have

$$m\|x\| \leq \|Ax\| \leq M\|x\|$$

$$\text{where } m = \frac{1}{2} \left(\sqrt{S^2 + 2|\Delta|} - \sqrt{S^2 - 2|\Delta|} \right)$$

and A is invertible iff $\Delta \neq 0$.

2. If $C(0, 1)$ is the set of functions continuous on $[0, 1]$ with the uniform metric, and $D(0, 1)$ is the set of continuously differentiable functions on $[0, 1]$ with the same metric;

(a) Is $T : C \rightarrow D$ given by $T(f)(x) = \int_0^x f(t) dt$ continuous?

Ans. If $\|f\| \leq 1$,

$$\begin{aligned} \left| \int_0^x f(t) dt \right| &\leq \int_0^x |f(t)| dt \leq x \\ \left\| \int_0^x f(t) dt \right\| &\leq 1 \\ \|T\| &= 1 \end{aligned}$$

and T is continuous.

(b) Is $T : D \rightarrow C$ given by $T(f)(x) = f'(x)$ continuous?

Ans. Consider $f_n = \sin nx \in D$

$\|f_n\| = 1$, but $\|f'_n\| = \|n \cos nx\| = n$.

Therefore, for any $M > 0$, if $n > M$

$$\|T(f_n)\| > M\|f_n\|$$

and T is not continuous.

These results are a variant of the results that a uniformly convergent series can be integrated term by term but not necessarily differentiated term by term.

3. Let T be a linear transformation from ℓ^1 to ℓ^1 .

Set $e_i = \{\delta_{ij}\}$ and $a_i = T(e_i)$.

Show that $\|T\| = \sup_i \|a_i\|_1$.

Ans.

For $x = \{\xi_i\} \in \ell^1$, let $x_n = \sum_{i=1}^n \xi_i e_i$.

$$\begin{aligned} T(x_n) &= \sum_{i=1}^n \xi_i T(e_i) \\ \|T(x_n)\| &\leq \sum_{i=1}^n |\xi_i| \|a_i\| \leq (\sup_i \|a_i\|) \sum_{i=1}^n |\xi_i| \end{aligned}$$

Taking the limit as $n \rightarrow \infty$, we have

$$\|T(x_n)\| \leq (\sup_i \|a_i\|) \|x\|$$

For any $\epsilon > 0$, we can find a_I such that

$$\|a_I\| > \sup_i \|a_i\| - \epsilon$$

so that

$$\|T(e_I)\| > (\sup_i \|a_i\| - \epsilon) \|e_I\|$$

Therefore

$$(\sup_i \|a_i\| - \epsilon) < \|T\| \leq \sup_i \|a_i\|$$

and the result follows.

4. Let X be a finite dimensional normed linear space, and Y a normed linear space.

If T is a linear operator from X to Y , show that T is continuous.

Ans.

Since X is finite dimensional, X is linearly homeomorphic to $\ell^1(n)$.

Let f be the continuous invertible linear function defining the homeomorphism.

We can represent $T : X \rightarrow Y$ as $S = T \circ f : \ell^1 \rightarrow Y$, where S is a linear transformation.

If (e_i) is the basis for ℓ^1 and $a_i = S(e_i)$,

$$\|S(x)\| = \|S(\{\xi_i\})\| \leq \sum_{i=1}^n |\xi_i| \|a_i\| \leq \left(\max_i \|a_i\|\right) \|x\|$$

Therefore S is continuous and so $T = S \circ f^{-1}$ is also continuous.
